                                                                                                                                                                                                                                                 The present sequence is the protein sequence of Streptococcus downer glucosyltransferase-S (GTF-S). Peptide fragments of GTF-S, especially from the catalytic domain of the polypeptide, can be used in immunogenic compositions and subunit vaccines for dental caries. These compositions comprise a major histocompatibility complex (MHC) class II protein-binding peptide from S. mutants glucan binding protein-B (GbpB) covalently linked with a peptide fragment of a streptococcal glucosyltransferase. The compositions are used in a claimed method of eliciting production of an antibody in a mammal. Diepitopic or multiepitopic polypeptides can be prepared synthetically or by recombinant DNA technology. Antibodies raised against MHC class II binding fragments of GbpB can be used in passive immunisation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Glucosyltransferase; enzyme; vaccine; anticaries;

                                                                                                                                                                                                                                                                                                                                                                                                                            molecule;
```

Glucosyltransferase B or D protein useful for producing as substitutes for and additions to modified starch and manufacture, comprises mutations in specific positions. a glucan useful latexes in pape paper

WPI; 2002-414332/44

Claim 36; Page; 44pp; English.

cc R polypeptide having changes at position from 148V, D457N, D5677, D457N/D5677, D457N/D5677, D457N/D571K, D5677/D571K, D5677/D571K, D5677/D571K, D6677/D571K, M610447, M64074, M640

biologically produced input materials, is more cost-effective and environmentally friendly. Moreover, glucans also exhibit thermoplastic properties and impart gloss to the paper during coating step. The present sequence represents a GTFB mutant of the invention. Note: The present sequence is not shown in the specification but was created by the indexer

the GTFB sequence appearing as AAU98027 and the information

The invention an isolated protein comprising a glucosyltransferase (GTF) CC Hypeptide having changes at position from 1448V, D567T, D57TK, D567T, D57TK, K1014T, D67T/D57TK, D567T/D57TK, K1014T, CC H148V/D457N/D567T/D57TK/K719Q/K1014T, Y169A/Y10A/X17JA, and K779Q or a CC GTF D polypeptide having changes at positions from T589D, T589E, M471D, CC GTF D polypeptide having changes at positions from T589D, T589E, M471D, CC GTF muttant, an isolated polynucleotide which encodes P1 or P2, or its complementary polynucleotide, a ribonucleic acid sequence encoding the CC GTF muttant, an expression cassette comprising the polynucleotide operably CC linked to a promoter, a vector comprising the polynucleotide operably CC coating composition comprising a glucan produced in the condens of the condens of the condens of the condens of the composition comprising a glucan produced in a plant transformed with a gene encoding the mutant GTF, wild type or, starch, a latex, conditions of producing the mutant GTF, wild type or starch, a latex, conditions of producing a glucan in the amyloplast and/or vacuole or a maize line comprising the glucan in a plant. The wettor is useful comprising the glucan in a plant. The wettor is useful comprising the glucan in a plant. The wettor of the plant and inducing expression of the conditions to produce a regenerated plant and inducing expression of the conditions of the polynucleotide for a time sufficient to produce the glucan in the conditions of the conditions of the conditions of the sufficient of produce a transforming and glucan in the amyloplast of potating expression of the conditions are useful as substitutes for and additions to modified starch of the conditions are useful as substitutes for and additions to modified starch where the vector or and additions to modified starch of the vacuole of sugar beet.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           US2002031826-AI
                                                                    and latexes in paper manufacture. Unlike prior art techniques, which and latexes in paper manufacture. Unlike prior art techniques, which require input materials that produce chemical effluents, paper manufacture utilising the glucan produced by GTF, which utilises biologically produced input materials, is more cost-effective and environmentally friendly. Moreover, glucans also exhibit thermoplastic properties and impart gloss to the paper during coating step. The present sequence represents a GTFB mutant of the invention. Note: The present sequence is not shown in the specification but was created by the indexer using the GTFB sequence appearing as AAU98027 and the information in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Claim 36; Page; 44pp; English

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention relates to glucan capable of being produced by glucosyltransferase activity of a lactic acid bacterium on a sucrose substrate. The method is useful as a thickener, as a prebiotic and as a bloactive agent and as an anti-corrosion agent. The glucan can be incorporated in foodstuffs such as beverages, sauces, dressings, dairy products. The glucan is useful as anticorrosion agent, e.g. for the pharmaceutical compositions intended for improving the condition of the contaction of the state of the condition of the contaction of the

The method is useful as a thickener, as a prebiotic and as a bioactive agent and as an anti-corrosion agent. The glucan can be incorporated in foodstuffs such as beverages, sauces, dressings, dairy products. The glucan is useful as anticorrosion agent, e.g. for the protection of ship hulls. It can also be incorporated in nutritional or pharmaceutical compositions intended for improving the condition of the gastrointestinal tract. The present sequence represents a sequence of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Glucan; glucosyltransferase activity; thickener; prebiotic; bioactive agent; anti-corrosion agent; foodstuff; gastrointestinal tract.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Glucansucrase sequence from
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Novel glucan produced by glucosyltransferase activity of lactic acid bacterium on sucrose substrate, and having backbone consisting of alpha (1,3)- and alpha (1,6)-linked anhydroglucose units, useful as thickener
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              20-JUL-2001; 2001EP-00202752.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention relates to glucan capable of being produced by glucosyltransferase activity of a lactic acid bacterium on a sucrose substrate. The method is useful as a thickener, as a prebiotic and as a bloative agent and as an anti-corrosion agent. The glucan can be incorporated in foodstuffs such as beverages, sauces, dressings, dairy products. The glucan is useful as anticorrosion agent, e.g. for the protection of ship hulls. It can also be incorporated in nutritional or pharmaceutical compositions intended for improving the condition of the gastrointestinal tract. The present sequence represents a sequence of the

complementary polynucleotice, a ribonucleur sequence encounty the coll inked to a promoter, a vector comprising the polynucleotide operably cell introduced with the vector, a transgenic plant, a paper sixing and/or vector, a seed or tuber from the transgenic plant, a paper sixing and/or coating composition comprising a glucan produced in a plant transformed with a gene encoding the mutant GTP, wild type or, starch, a latex, cell the glucan is produced in the amyloplast and/or vacuole or a maize line deficient in starch biosynthesis, transformed with a gene encoding a glucan (paper sizing/coating agent). The vector is useful comprising the glucan (paper sizing/coating agent). The vector is useful cell polynucleotide for a time sufficient to produce a regenerated plant and inducing expression of the polynucleotide for a time sufficient to produce the glucan in the plant cell under plant growing to glucans are useful as substitutes for antains a transit sequence from cell under plant, where the vector contains a transit sequence from chlorophyll AB binding protein to produce a transgenic plant, and glucan cell under plant, and glucan cell under spant and substitutes for and additions to modified starch cell under spant and plant, and glucan and latexes in paper manufacture. Unlike prior art techniques, which cell conditions to modified starch cell biologically produced input materials, is more cost-effective and cell properties and impart gloss to the paper during coating step. The present cell sequence represents a GTFD matant of the invention. Note: The present cell using the GTFD sequence appearing as AAU98029 and the information in

```

Glucosyltransferase B or D protein useful for producing as substitutes for and additions to modified starch and manufacture, comprises mutations in specific positions. a glucan useful latexes in pape

N-PSDB;

ABK52940

Page 38-42; 44pp; English.

The invention an isolated protein comprising a glucosyltransferase (GTF) CC K1014T, b457N/D567T, b457N/D571K, D567T/D571K,
Sequence 1430 AA;

Best Local Similarity Query Match 81.8%; 90.0%; Score Pred. 90; DB 5; 8.2e-07; Length 1430;

                                                                                                                                                                                                                                                                                                                                                                                           The present sequence is the protein sequence of Streptococcus mutans glucosyltransferase-D (GTF-D). Peptide fragments of GTF-D, especially from the catalytic domain of the polypeptide, can be used in immunogenic compositions and subunit vaccines for dental caries. These compositions comprise a major histocompatibility complex (MHC) class II protein-binding peptide from S. mutants glucan binding protein-B (GbpB) covalently linked with a peptide fragment of a streptococcal glucosyltransferase. The compositions are used in a claimed method of eliciting production of an antibody in a mammal. Diepitopic or multiepitopic polypeptides can be prepared synthetically or by recombinant DNA technology. Antibodies raised against MHC class II binding fragments of GbpB can be used in passive immunisation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Composition useful as vaccines for a glucan binding protein-B binding class II protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                07-MAR-2002; 2002US-0363209P.

The method is useful as a thickener, as a prebiotic and as a bloactive agent and as an anti-corrosion agent. The glucan can be incorporated in foodstuffs such as beverages, sauces, dressings, dairy products. The glucan is useful as anticorrosion agent, e.g. for the protection of ship hulls. It can also be incorporated in nutritional or pharmaceutical compositions intended for improving the condition of the gastrointestinal tract. The present sequence represents a sequence of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Glucan; glucosyltransferase activity; thickener; prebiotic; bioactive agent; anti-corrosion agent; foodstuff; gastrointestinal tract.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Glucansucrase sequence from strain Lb33.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Claim 11; Fig 1; 51pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Novel glucan produced by glucosyltransferase activity of lactic acid bacterium on sucrose substrate, and having backbone consisting of alpha (1,3)- and alpha (1,6)-linked anhydroglucose units, useful as thickener.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               22-JUL-2002; 2002WO-NL000495.

Peptide
The present sequence is a novel dextran saccharase, DSR-E, rrom Leuconostoc mesenteroides NRRL B-1299. The saccharase has glycosyl transferase activity suitable for producing dextrans having alpha(1-2) branches from sucrose, p-nitrophenyl-alpha-D-glocopyranoside, alpha-fluoroglucose, alpha-D-glucopyranoside-alpha-D-sorbopyranoside or alpha-glactopyranosyl-sucrose. The dextran saccharase is useful in prebiotic, pharmaceutical or commetic compositions. The dextrans and related compounds having alpha(1-2) bonds, produced using DSR-E, may be involved in signalling/cellular recognition processes in vivo (specifically in in signalling/cellular recognition processes or on the skin); and are
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Peptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Peptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Peptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Peptide

                 The present sequence represents a glycosyltransferase, designated DSR-D. This enzyme produces dextrans having alpha(1-2) branches from sucrose, alpha-D-fluoroglucose, p-nitrophenol alpha-D-glucopyranoside, alpha-D-glucopyranoside alpha-D-sorbofuranoside or 4-O-alpha-D-glucopyranosylsucrose. The polypeptide is used to prepare oligosaccharides and oligosides for prebiotic, pharmaceutical, diagnostic and cosmetic applications, e.g. to improve health and weight gain in animals; prevent cancer of the colon; and treat skin disorders such as acne, dandruff and body odour. The oligosaccharides and oligosides produced by DSR-D improve intestinal transit and assimilation of calcium, magnesium and other minerals
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      potentially useful for improving intestinal transit, assimilation of minerals (e.g. calcium and/or magnes: cancer of the colon and combating skin problems such and body odour.                                                                                                                                                                                                               infant formulae and pet foods. Dextransucrase can also be bound to eg. vitamins or oral vaccines for delivering these to foods, using (A) as carrier. The method produces foods with attractive and uniform texture, since dextransucrase is evenly distributed and forms a thickening agent in situ, with the amount formed being controlled by the amount of dextransucrase bound. Milk does not have to be coagulated in order to achieve a good texture, so the amount of acidic by-products formed is reduced. Dextransucrase binds to many different types of cells over wide ranges of temperature and pH and the treated bacteria can be stored in liquid or powdered form. The present sequence represents the amino acid sequence of dextransucrase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        02-MAY-2002.

Glucan is a polysaccharide (for example dextran) which uses D-glucoses, such as a starch and a cellulose, as a structural unit. The modified enzyme of the invention is useful in the manufacture of glucan. The selection of the active centre area of DS which carries out transduction, enables changes in structure and character of an enzyme-reaction product and their application to various uses. The present sequence is that of the Leuconostoc mesenteroides dextran sucrase protein used during the exemplification of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Novel modified dextran sucrase which exchanges one site of active zone of dextran sucrase for active center zone of different types dextran sucrase, useful for manufacturing glucan.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       dextran sucrase; active centre zone; glucan; polysaccharide; dextran; D-glucose; starch; cellulose; glucan manufacture; transduction;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ADC54807;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     03-OCT-2001; 2001JP-00307067.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             This invention relates to a modified dextran sucrase (DS) exchanging one site of the active centre zone of a dextran sucrase for the active centre zone of different types of dextran sucrase. Glucan is a polysaccharide (for example dextran) which uses D-glucoses, such as a starch and a cellulose, as a structural unit. The modified enzyme of the invention is useful in the manufacture of glucan. The selection of the active centre area of DS which carries out transduction, enables changes in structure and character of an enzyme-reaction product and their application to various uses. The present sequence is that of a protein which is related to the Leuconostoc mesenteroides dextran sucrase protein and which was used during the exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Novel modified dextran sucrase which exchanges one site of active zone of dextran sucrase for active center zone of different types dextran sucrase, useful for manufacturing glucan.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            15-APR-2003

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present sequence is the protein sequence of Streptococcus sobrinus glucosyltransferase-U (GTF-U). Peptide fragments of GTF-U, especially from the catalytic domain of the polypeptide, can be used in immunogenic compositions and subunit vaccines for dental caries. These compositions comprise a major histocompatibility complex (MHC) class II proteinbinding peptide from S. mutants glucan binding protein-B (GbpB) covalently linked with a peptide fragment of a streptococcal glucosyltransferase. The compositions are used in a claimed method of eliciting production of an antibody in a mammal. Dispitopic or multiepitopic polypeptides can be prepared synthetically or by recombinant DNA technology. Antibodies raised against MHC class II binding fragments of GbpB can be used in passive immunisation.

The vector is useful CC comprising the glucan in a plant The method comprises transforming a CC plant cell with the vector, growing the plant cell under plant growing CC conditions to produce a regenerated plant and inducing expression of the CC polynucleotide for a time sufficient to produce the glucan in the composition to produce a transit sequence from CC chlorophyll AB binding protein to produce a transit sequence from CC conditions are useful as substitutes for and additions to modified starch cc properties and impart gloss to the paper during costing the green which CC properties and impart gloss to the produced by GTF, which utilises biologically produced input materials, is more cost-effective and CC properties and impart gloss to the paper during costing step: The present counting the GTFB mutant of the invention. Note: The present counting the GTFB sequence appearing as AAU98027 and the information in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        유

Glucosyltransferase B or D protein useful for producing as substitutes for and additions to modified starch and manufacture, comprises mutations in specific positions. a glucan useful latexes in paper in paper

Claim 36; Page; 44pp; English.

CC GTF mutant, an isolated polymucleotide which encodes ploor producing the complementary polymucleotide, a ribonucleic acid sequence encoding the CC GTF mutant, an expression cassette comprising the expression cassette, host CC linked to a promoter, a vector comprising the expression cassette, host CC coating composition comprising a glucan produced in a plant transformed CC with a gene encoding the mutant GTF, wild type or, starch, a latex, CC with a gene encoding the mutant GTF, wild type or, starch, a latex, CC with a gene encoding the mutant GTF, wild type or, starch, a latex, CC with a gene encoding the mutant GTF, wild type or, starch, a latex, CC with a gene encoding the mutant GTF, wild type or starch where CC deficient in starch biosynthesis, transformed with a gene encoding a glucosyltransferase B or D enzyme, wild-type or mutant and a paper CC comprising the glucan (paper sizing/coating agent). The vector is useful CC planticient by producing a glucan in a plant. The method comprises transforming a CC comprising the producing a plant. The plant cell under plant growing CC comprising the produce a regenerated plant and inducing expression of the CC polymucleotide for a time sufficient to produce the glucan in the CC plucans are useful as substitutes for and additions to modified starch comprises in paper manufacture. Unlike prior art techniques, which cc manufacture utilising the glucan produce by GTF, which utilises biologically produced input materials, is more cost-effective and cc properties and impart gloss to the paper during coating step. The present sequence is not shown in the specification but was created by the indexer sequence is not shown in the specification but was created by the indexer sequence is not shown in the specification but was created by the indexer sequence is not shown in the specification but was created by the indexer sequence is not shown in the specification but was created by the indexer sequence is not shown in the specification but was created by the indexer sequenc The invention an isolated protein comprising a glucosyltransferase (GTF) B polypeptide having changes at position from 1448V, D457N, D567T, K1014T, D457N/D567T, D457N/D571K, D567T, D577N/D571K/X1014T, K1014T, V169A/Y170A/Y171A, and K779Q or a I448V/D457N/D567T/D571K/K779Q/K1014T, Y169A/Y170A/Y171A, and K779Q or a GTF D polypeptide having changes at positions from T589D, T589E, N471D, GTF D polypeptide having changes at positions from T589D, T589E, N471D, 1448V/D457W/D567T/D57LK/K/19V/KLUZZ, 1400V/D457W/D567T/D57LK/K/19V/KLUZZ, 1400V/D457W/D589D, T589E, N471D, GTF D polypeptide having changes at positions from T589D, T589E, N471D, N471D/T589D, and N471D/T589E. Also included are a glucan produced by the management of the second secon the GTFB sequence appearing 36 as AAU98027

Sequence B

Unlike prior art techniques, which CC require input materials that produce chemical effluents, paper CC manufacture utilising the glucan produced by GFD, which utilises CC environmentally friendly. Moreover, glucans also exhibit thermoplastic groperties and impart gloss to the paper during coating step. The present Sequence is not shown in the specification but was created by the indexer cusion the GTPR semence appearance a AMIGNATY and the information in

Glucosyltransferase WPI; 2002-414332/44.

W e U

protein useful for producing a glucan useful

```
CC The invention an isolated protein comprising a glucosyltransferase (GTF)
CC B polypeptide having changes at position from 1448V, D457N, D557T,
CC X1014T, D457N/D557T, D457N/D571K, D557T/D571K, X1014T,
CC Y418V/D457N/D567T,D571K/K779Q/K1014T, X169A/Y170A/Y171A, and K79Q or a
CC GTF mutant, an isolated polymuclectide which encodes P1 or P2, or its
CC complementary polymuclectide, a ribonucled are a glucan produced by the
CC GTF mutant, an isolated polymuclectide which encodes P1 or P2, or its
CC complementary polymuclectide, a ribonucled acid sequence encoding the
CC complementary polymuclectide, a ribonucled acid sequence encoding the
CC conting composition comprising the expression cassette, host
CC coating composition comprising glucan produced in a plant transformed
CC coating composition comprising splucan produced in a plant transformed
CC with a gene encoding the mutant GTF, wild type or, starch, a latex,
with a gene encoding the mutant GTF, wild type or, starch, a latex,
CC the glucan is produced in the amyloplast and/or vacuole or a maize line
CC deficient in starch biosynthesis, transformed with a gene encoding a
CC glucan is produce or bearing coating agent). The vector is useful
CC complicions to produce a regenerated plant and inducing expression of the
CC golymuclectide for a time sufficient to produce the glucan in the
CC polymuclectide for a time sufficient to produce a transgenic plant growing
CC plant cell with the vector, growing the plant cell under plant growing
CC plant cell with the vector, growing the plant and inducing expression of the
CC glucans are useful as substitutes for and additions to modified starch
CC is produced in the amyloplast of potato or the vacuole of sugar beet.
CC glucans are useful as substitutes for and additions to modified starch
CC is produced in the amyloplast of potato or the vacuole of sugar beet.
CC glucans are useful as substitutes for and additions to modified starch
CC is produced in the amyloplast of potato or the vacuole of sugar beet.
CC glucans are s

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              S
The invention an isolated protein comprising a glucosyltransferase (GTF) CC Hypeptide having changes at position from I448V, D457N, D567T, D457N/D571K, D567T/D571K, D567T/D571K/K1014T, CC I1448V/D457N/D567T, D457N/D571K, D567T/D571K/K1014T, CC GTF D polypeptide having changes at positions from T589D, T589E, M471D/T589D, and M471D/T589D. Also included are a glucan produced by the CC GTF muttant, an isolated polymucleotide which encodes Pl or P2, or its complementary polymucleotide, a ribonucleic acid sequence encoding the CC GTF mutant, an expression cassette comprising the polymucleotide operably CC linked to a promoter, a vector comprising the expression cassette, host cell introduced with the vector, a transgenic plant comprising the vector, a seed or tuber from the transgenic plant, a paper sizing and/or coating composition comprising a glucan produced in a plant transformed with a gene encoding the mutant GTF, wild type or, starch, a latex, the composition condecing the composition comprising a glucan produced in a plant transformed composition comprising as glucan produced in a plant transformed composition comprising as glucan produced in a plant transformed composition comprising as glucan produced in a plant transformed composition comprising as glucan produced in a plant transformed composition comprising as glucan produced in a plant transformed composition comprising as glucan produced in a plant transformed composition comprising as glucan produced in a plant transformed composition comprising as glucan produced in a plant transformed composition comprising as glucan produced in a plant transformed composition comprising as glucan produced in a plant transformed composition comprising as glucan produced in a plant transformed composition comprising as glucan produced in a plant transformed composition comprising the composition comprising the composition comprising the composition comprising the composition comprising the composition composition comprising the composition comprising the composition 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      cc comprising the glucan (paper sixing/coating agent). The vector is useful for producing a glucan in a plant. The method comprises transforming a cc plant cell with the vector, growing the plant cell under plant growing cc conditions to produce a regenerated plant and inducing expression of the cripulose biphosphate carboxylase small subunit, waxy, brittle-1 and cc ribulose biphosphate carboxylase small subunit, waxy, brittle-1 and cc chlorophyll AB binding protein to produce a transgenic plant, and glucan is produced in the amyloplast of potato or the vacuole of sugar beet. cc glucans are useful as substitutes for and additions to modified starch cc and latexes in paper manufacture. Unlike prior art techniques, which crequire input materials that produce chemical effluents, paper convironmentally produced input materials, is more cost-effective and comproduced imput materials, is more cost-effective and comproduced input materials, is more cost-effective and compromentally friendly. Moreover, glucans also exhibit thermoplastic environmentally friendly mutant of the invention. Note: The present sequence is not shown in the specification but was created by the indexer cost in the cost of the invention in the information in

Glucans are useful as substitutes for and additions to modified starch and latexes in paper manufacture. Unlike prior art techniques, which require input materials that produce chemical effluents, paper manufacture utilising the glucan produced by GTF, which utilises biologically produced input materials, is more cost-effective and biologically friendly. Moreover, glucans also exhibit thermoplastic properties and impart gloss to the paper during coating step. The present sequence represents a GTFD mutant of the invention. Note: The present sequence is not shown in the specification but was created by the indexer series and the step of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Glucosyltransferase B or D protein useful for producing as substitutes for and additions to modified starch and manufacture, comprises mutations in specific positions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Claim 36; Page; 44pp; English

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention relates to glucan capable of being produced by glucosyltransferase activity of a lactic acid bacterium on a sucrose substrate. The method is useful as a thickener, as a prebiotic and as a bioactive agent and as an anti-corrosion agent. The glucan can be incorporated in foodstuffs such as beverages, sauces, dressings, dairy products. The glucan is useful as anticorrosion agent, e.g. for the products of ship hulls. It can also be incorporated in nutritional or pharmaceutical compositions intended for improving the condition of the gastrointestinal tract. The present sequence represents a sequence of the glucansucrase gene. (Updated on 23-OCT-2003 to standardise OS field)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Van
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 20-JUL-2001; 2001EP-00202752.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention relates to glucan capable of being produced by glucosyltransferase activity of a lactic acid bacterium on a sucrose substrate. The method is useful as a thickener, as a prebiotic and as a bioactive agent and as an anti-corrossion agent. The glucan can be incorporated in foodstuffs such as beverages, sauces, dressings, dairy products. The glucan is useful as anticorrosion agent, e.g. for the protection of ship hulls. It can also be incorporated in mutritional or pharmaceutical compositions intended for improving the condition of the gastrointestinal tract. The present sequence represents a sequence of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Novel glucan produced by glucosyltransferase activity of lactic acid bacterium on sucrose substrate, and having backbone consisting of alpha (1,3) - and alpha (1,6)-linked anhydroglucose units, useful as thickener.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      bioactive
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Lactobacillus fermentum
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Glucan;
The present invention relates to glucan capable of being produced by glucosyltransferase activity of a lactic acid bacterium on a sucrose substrate. The method is useful as a thickener, as a prebiotic and as bioactive agent and as an anti-corrosion agent. The glucan can be incorporated in foodstuffs such as beverages, sauces, dressings, dair products. The glucan is useful as anticorrosion agent, e.g. for the protection of ship hulls. It can also be incorporated in nutritional
                                                                                                                                                                                                                                                                                                                                                                         20-JUL-2001; 2001EP-00202752:

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Streptococcus mutans Synthetic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Glucosyltransferase;
The invention an isolated protein comprising a glucosyltransferase (GTF) B polypeptide having changes at position from 1448V, D457N, D567T, K1014T, D457N/D567T, D457N/D571K, D567T/D571K/K1014T, K1014T, D457N/D567T/D571K/K779Q/K1014T, 1469A/K170A/K171A, and K779Q or a 1448V/D457N/D567T/D571K/K779Q/K1014T, 1469A/K170A/K171A, and K779Q or a 1750 D polypeptide having changes at positions from T589D, T589E, N471D, N471D/T589E. Also included are a glucan produced by the N471D/T589D, and N471D/T589E. Also included are a glucan produced by the Complementary polynucleotide which encodes P1 or P2, or its complementary polynucleotide polynucleic acid sequence encoding the Complementar, an expression cassette comprising the polynucleotide operably linked to a promoter, a vector comprising the expression cassette, host linked to a promoter, a vector comprising the expression cassette, host cell introduced with the vector, a transgenic plant comprising the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Misc-difference

ce the glucan is produced in the amyloplast and/or vacuole or a maize line of deficient in starch biosynthesis, transformed with a gene encoding a cell glucan is produced in the amyloplast and/or vacuole or a maize line of glucosyltransferase B or D enzyme, wild-type or mutant and a paper of producing a glucan (paper sizing/coating agent). The vector is useful comprising the glucan in a plant. The method comprises transforming a cell with the vector, growing the plant cell under plant growing conditions to produce a regenerated plant and inducing expression of the polynucleotide for a time sufficient to produce the glucan in the cregenerated plant, where the vector contains a transit sequence from cell produced in the amyloplast of potato or the vacuole of sugar beet. Cell company is a substitutes for and additions to modified starch cell cand latexes in paper manufacture. Unlike prior art techniques, which cell interest input materials that produced by GTP, which utilises biologically produced input materials, is more cost-effective and cell properties and impart gloss to the paper during coating the present sequence is not shown in the specification but was created by the indexer casing the GTPB sequence appearing as AAU98027 and the information in

CC complementary polymucleotide, a ribonucleic acid sequence encoding the CC linked to a promoter, a vector comprising the polymucleotide operably CC linked to a promoter, a vector comprising the expression cassette, host CC cell introduced with the vector, a transgenic plant, a paper sizing and/or vector, a seed or tuber from the transgenic plant, a paper sizing and/or CC oating composition comprising a glucan produced in a plant transformed CC with a gene encoding the mutant GTF, will type or, starch, a latex, and the applicability of the modifications or glucan and starch where CC deficient in starch biosynthesis, transformed with a gene encoding a glucosyltransferase B or D enzyme, wild-type or mutant and a paper CC comprising the glucan in a plant. The method comprises transforming a glucosyltransferase B or D enzyme, wild-type or mutant and apaper CC plant cell with the vector, growing the plant cell under plant growing CC conditions to produce a regenerated plant and inducing expression of the polymucleotide for a time sufficient to produce the glucan in the crimal cc ribulose biphosphate carboxylase small subunit, waxy, brittle-I and CC composition the amyloplast of potato or the vacuole of sugar beet. CC glucans are useful as substitutes for and additions to modified starch cC and latexes in paper manufacture. Unlike prior art techniques, which cc require input materials that produce begins a fluents, paper CC conjuctably produced input materials, is more cost-effective and cc plants and impart gloss to the paper during step. The present sequence is not shown in the specification but was created by the indexer using the GTPB metant of the invention. Note: The present cc lasing the GTPB metant of the invention. Note: The present consists of the invention but was created by the indexer classing the sequence appearing as AAU98027 and the information in The invention an isolated protein comprising a glucosyltransferase (GTF) B polypeptide having changes at position from I448V, D457N, D567T, K1014T, D457N/D567T, D457N/D571K, D567T/D571K, D567T/D571K/K1014T, T169A/Y17DA/Y17DA, and K779Q or a I448V/D457N/D567T/D571K/K779Q/K1014T, Y169A/Y17DA/Y17DA, and K779Q or a GTF D polypeptide having changes at positions from T589D, T589E, N471D, N471D/T589D, and N471D/T589E. Also included are a glucan produced by the GTF mutant, an isolated polymucleotide which encodes P1 or P2, or its complementary polymucleotide, a ribonucleic acid sequence encoding the grap mutant an avaraged an areast a communication the complementary polymucleotide, a ribonucleic acid sequence encoding the
